**Note:** The results relate only to the specimens tested and should be correlated with clinical findings.

### Interpretation guidance:-

- 1. Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- 2. A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection\*
- 3. A positive test result is only tentative, and will be reconfirmed by retesting
- 4. Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. \*
- 5. A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- 6. Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR
